

FS3000

Fast-Scan Container/Vehicle Inspection System

Summary

The THSCAN® FS3000 is a new product, designed especially for the requirements of high volume locations. With multiple safety solutions, the system can avoid scanning the vehicle cab automatically, the driver can drive the vehicle through the scanning tunnel directly. Concealed contrabands, or

stowaways inside containers, can easily be detected by the system. It is suitable for inspection containers, trucks and other vehicles at seaports, traffic hinges, heavy patrol ports, tax protected zones, etc.

Technical Features

- Avoids scanning the cab automatically; vehicles proceed through scanning tunnel directly
- State-of-the-art technology for excellent image quality
- Non-distortion scanning image at high scanning speed

- Self-shielding and modularized design improves the system's ability to relocate
- Customized hardware and software to suit customer's requirements
