

# MT1213LT

## Container/Vehicle Inspection System

### Summary

The THSCAN® MT1213LT is a completely self-contained X-ray inspection system combining outstanding ability and unmatched performance, with a linear accelerator as its radiation source. It offers an ideal way of non-invasively inspecting conventional cargo contained in trucks, ocean

going containers, as well as automobiles and cargo vans. It provides our customers with a cost-effective, efficient tool for detecting contraband, prohibited products and undeclared products rapidly and safety.

### Technical Features

- Advanced technology for excellent image quality and high penetration
- System requires no additional infrastructure
- Mobility and high flexibility for on site inspection
- Designed to function in harsh weather conditions, such as extreme heat and cold, as well as high winds
